SUMMARY

Full-stack developer (Angular/React + Java/Spring Boot) shipping production features at TCS Canada; previously built supply-chain planning UI at Kinaxis. Builds and self-hosts two live Spring Boot applications end to end.

TECHNICAL SKILLS

- **Languages:** Java, TypeScript, JavaScript (ES6+), SQL, Python, Kotlin, HTML5, CSS3/SCSS
- **Frontend:** Angular (RxJS, Reactive Forms), React (Hooks), Responsive Design, Lazy Loading, Component Architecture
- **Backend & APIs:** Spring Boot, Spring Security, Spring Data JPA, REST, Microservices, JWT, RBAC, Swagger/OpenAPI
- **Data:** PostgreSQL, MySQL, MongoDB, Redis, Query Optimization, Indexing, Data Modeling
- **Testing:** JUnit, Mockito, Jest, React Testing Library, Jasmine/Karma, SonarQube
- **DevOps & Tools:** Docker, Kubernetes, Jenkins, CI/CD, Maven, Git/GitHub, AWS, Linux, Cloudflare Tunnel, Jira, Agile/Scrum

PROFESSIONAL EXPERIENCE

Full-Stack Developer, *TCS Canada* Jan 2026 – Present | Canada

- Built responsive self-service features in Angular and RxJS with reusable components and lazy loading, speeding page loads by 30% and cutting user task-completion time by 20%.
- Engineered REST APIs and modular services in Spring Boot and PostgreSQL, improving p95 response times by 28% and lowering failed transactions by 15% through tighter transaction handling.
- Hardened security with Spring Security, JWT, and role-based access control, reducing access-control defects found in security and regression testing by 40%.
- Accelerated data retrieval 35% through SQL query optimization, indexing, pagination, and Redis caching of repeated reads.
- Cut deployment preparation from 40 to 15 minutes by containerizing services with Docker and Kubernetes and automating Jenkins CI/CD pipelines.

Full-Stack Developer (Co-op), *Kinaxis* May 2025 – Oct 2025 | Canada

- Developed a React inventory-exception review module for a supply-chain planning portal, letting 30+ planners review at-risk items, locations, delivery dates, and statuses on one screen instead of 3.
- Engineered reusable TypeScript components (filterable data grids, severity indicators, summary cards, detail views) reused across 3 planning workflows, cutting new-view build time by 20%.
- Integrated views with REST APIs using typed data models, search, sorting, pagination, and loading/error states, handling 2,000+ exception records per view without UI lag.
- Raised module test coverage to 70% with Jest and React Testing Library, resolving 12 UI defects through code reviews and documenting component APIs.

PROJECTS

Expiry Tracker – Production Inventory App | *Spring Boot, REST, Linux, Cloudflare Tunnel* expiry.vrajcloud.dev

- Built a Spring Boot service tracking 50+ near-expiry products, used daily by 8 staff, cutting missed-expiry write-offs 80%.
- Self-hosted on an Android-based home server over HTTPS via Cloudflare Tunnel, with 99.9% uptime across 6+ months.

News AI – Smart Email News Aggregator | *Spring Boot, Gemini AI, JavaMail* api.vrajcloud.dev

- Built an AI service that aggregates and summarizes 100+ daily articles from 5 sources with Gemini AI.
- Automated daily digests to 25+ subscribers with Spring @Scheduled jobs and JavaMail, with retry on failed sends.

EDUCATION

Advanced Diploma, Software Development and Network Engineering, *Sheridan College* Jan 2023 – Dec 2025 | Canada

- **GPA:** 3.44 / 4.00 overall; 3.87 across final three terms
- **Coursework:** Advanced Java Frameworks, Cloud Architecting (AWS), Android Development, Network Security, Capstone
